# Who We Are What We Do

- Founded in 2015
- Friends and Family Owned Operation
- Located in Southern Colorado in the San Luis Valley
- We are a vertically integrated operation
  - We Breed our own seeds with our selected varieties throughout the winter months
  - Cultivate our own crops on 300 acres of outdoor land under center pivot irrigation following organic practices on USDA Organic Land
  - Extract those crops in house to Full Spectrum Distillate in our onsite lab
  - Manufacture our products in house in our lab and manufacturing space
  - We are licensed by the Colorado Department of Agriculture
  - We are licensed by the Colorado Department of Public Health as a food manufacturer and for shelf stability.

# What makes us Different

Our model of a vertically integrated company that produces our products from seed to shelf is one of the key aspects that separates us from the pack. We manage the entire process to ensure that the fine attention to detail and highest levels of quality are the primary focus of every step of the process. We know that if we do all everything to the best of our ability that will show in our end results and customers recognition of our products.

We are also not backed, funded or promoted by any large investor or marketing groups whose main focus is to charge as much as possible. Our primary focus is getting high quality products into the people we knows hands and grow that as organically as possible.

I've been taking the full spectrum tincture for about 6 months now. I have had shoulder problems for years and was tired of taking ibuprofen like it was candy. I decided to try cbd not thinking it was going to make difference, let me tell you I was wrong! The full spectrum tincture from these guys is amazing. I have had no more problems with my shoulder and I have been getting sleep the. I have been in years. All I have to do is take one dropper under my tongue before bed and I wake up feeling well rested and able to get on with the day! If you guys are looking for one of the best tinctures out there then you're in the right place.

# What makes us Different

In 2019 we won the award for Best Full Spectrum Hemp Derived CBD Distillate at the 2019 Denver Indo Expo because of our quality and purity.

We only use our award-winning full spectrum distillate in all our products that we produce. Many other brands will use a less refined crude oil to manufacture products which leave them with a darker color and more plant like chlorophyll taste. Using a more refined distillate lets the product come through with a very pure and clean taste without the unwanted fats, waxes and chlorophyll found in many other products and is pleasant to taste and use.

We extract all our distillates using Wiped Film Distillation or Thin Film Distillation using ethanol.

You will most likely be asked the question of, “I only use CO2 Extracted products because they are cleaner”

This can be true in some cases but not in ours. CO2 extraction also uses solvents in the process, although it is just not as well known. All of our solvents are 100% removed through our careful distillation processes to leave a pure and clean extract used in manufacturing.

# COA's

## COA's or Certificate of Authenticity

This is where we show that our products have the potency or amount of CBD as shown on the bottle. It also shows that they are free from residual solvents, pesticides and heavy metals. Any reputable company will supply these openly.

Potency – Our standard formula on all tinctures is 33.33mg/ml of CBD. The shown COA has slightly more at 34.72mg/ml.

Heavy Metal Tests show non detectable on all categories.

Pesticides testing shows that no pesticides have been detected and therefore have not been used on the crops.

And lastly a clean test shown on the residual solvents tests shows that all solvents were 100% removed during the extraction process.

This is the only area where someone may claim that CO2 is cleaner, if the extractor is not skilled enough to ensure the removal of all the solvents used during the extraction process. You will always see ND or Non Detectable on our COA's for residual solvents.

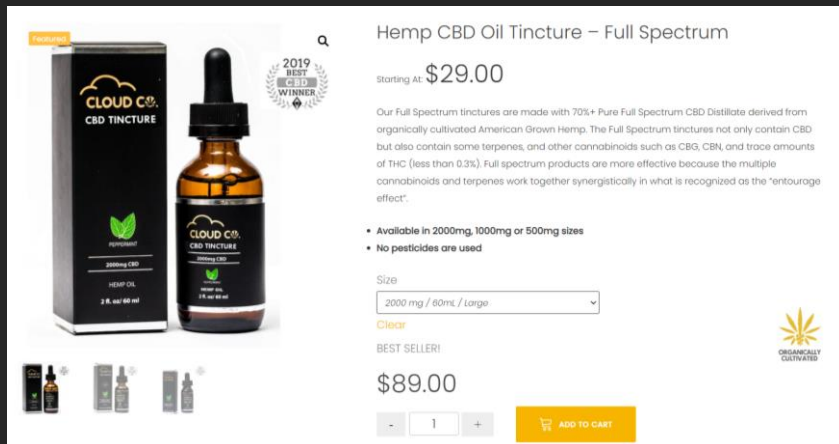

# What makes us different

## Price!

We are below 95% of the market on price because we can be and believe we should be.

One of our main goals was to produce these products at a price so that everyone could enjoy the benefits of CBD without worry. That is why we are a vertically integrated operation with no middle men markups being paid because it allows us to keep the price to the consumer low.

Hemp CBD Oil Tincture - Full Spectrum

Starting At \$29.00

Our Full Spectrum tinctures are made with 70%+ Pure Full Spectrum CBD Distillate derived from organically cultivated American Grown Hemp. The Full Spectrum tinctures not only contain CBD but also contain some terpenes, and other cannabinoids such as CBG, CBN, and trace amounts of THC (less than 0.3%). Full spectrum products are more effective because the multiple cannabinoids and terpenes work together synergistically in what is recognized as the "entourage effect".

- Available in 2000mg, 1000mg or 500mg sizes
- No pesticides are used

# The Endocannabinoid System

The endocannabinoid system is why CBD and Cannabinoids work with and in our bodies. The basic function of the ECS is to help regulate our Nervous System which in turn regulates all other functions in your body.

Your Endocannabinoid system also produces its own endogenous cannabinoids which are a set of lipid-based neurotransmitters used for signaling processes in your body.

CBD oil is what would be considered an exogenous cannabinoid, meaning it was not made within the body but outside and then introduced into the body. It plays a role in promoting endogenous cannabinoid production and reducing breakdown of endocannabinoids as well as supplementing those endogenous cannabinoids and increasing the ECS ability to operate optimally.

Cannabinoid Receptors which are a part of this naturally occurring Endocannabinoid System can be found throughout the body with two types. CB1 Receptors found primarily in the central nervous system and CB2 receptors found in the peripheral nervous system.

“In the 1990’s, scientists discovered endocannabinoids, the natural cannabis-like molecules produced by the human body. Scientists began to realize cannabis exerted its effects, in part, by mimicking our endocannabinoids. It appears the main function of the endocannabinoid system is to maintain bodily homeostasis—biological harmony in response to changes in the environment.<sup>1</sup> Taxonomic investigation revealed that the endocannabinoid system is incredibly old, having evolved over 500 million years ago. Moreover, it is present in all vertebrates—mammals, birds, reptiles, amphibians, fish, etc, all produce endocannabinoids!<sup>2</sup>”
